

CHAPTER 3: CONFORMITY

3.1 What is Transportation Conformity?

Transportation Conformity is a way to ensure federal funding and approval goes to transportation activities consistent with air quality goals. Before Metropolitan Transportation Plans (MTPs) and Transportation Improvement Programs (TIPs) can be adopted, approved, or accepted in nonattainment areas, Metropolitan Planning Organizations (MPOs) and the US Department of Transportation must make conformity determinations on these documents. Per Section 1761 (1) (A) of the Clean Air Act Amendments of 1990, conformity is granted when the following conditions are met:

(81) conformity to an implementation plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and (B) that such activities will not (i) cause or contribute to any new violation of any standards in any area; (ii) increase the frequency or severity of any existing violation of any standard in any area; or (iii) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area.

A regional emissions analysis is the key analytic component of the Transportation Conformity process. It is conducted to demonstrate regional emissions from on-road sources do not exceed the established Motor Vehicle Emission Budgets (MVEB), causing or contributing to violations of the Environmental Protection Agency's (EPA) National Ambient Air Quality Standards (NAAQS), and ensures transportation activities are consistent with air quality goals identified in the State Implementation Plan (SIP).

The determination of the analysis is a two-step process in metropolitan areas. The first step is for the MPO to make the initial Transportation Conformity determination at the local level. For the North Central Texas (NCT) nonattainment area, this responsibility falls with the Regional Transportation Council (RTC), the MPO's policy body. The second step is for the Federal Highway Administration and the Federal Transit Administration to make a joint Transportation Conformity determination at the federal level. Upon federal approval, a four-year window begins during which projects, programs, and policies identified in the MTP and TIP may move toward implementation.

Another important goal of conformity is to demonstrate the timely implementation of Transportation Control Measures (TCMs). TCMs are specific projects and programs designed to reduce emissions from transportation sources by reducing or relieving congestion. TCMs in the SIP are contained and funded in the MTP and the TIP. The TCMs are selected through the comprehensive transportation planning process during the development of these documents. Examples, pictured in Exhibit 3.1-1, include Intelligent Transportation System projects and traffic signal progression to help relieve congestion, as well as bike/pedestrian pathways offering alternate commute strategies.

Exhibit 3.1-1: Intelligent Transportation System Message Sign/Traffic Signal/Bike Pedestrian Path

Federal law also requires the state, working with the nonattainment area, to develop additional control measures to meet the Reasonable Further Progress (RFP) and Attainment Demonstration (AD) SIPs. Examples of these programs are included in Chapter 4 in the AD and RFP SIP. In addition, Appendix H of the AD SIP includes locally implemented control strategies adopted by the RTC.¹⁵

The first Transportation Conformity for NCT occurred in 1998. Exhibit 3.1-2 provides a historical summary of conformity-related activities in NCT.

This report contains conformity determinations conducted for Mobility 2045 – 2022 Update, with supporting 2023-2026 TIP, with both documents meeting the requirements of the Clean Air Act (United States Code, Title 42 §7504, 7506 (c) and (d)) as amended on November 15, 1990, the applicable SIP, and the conformity rule (40 CFR Part 93). This conformity determination was conducted with the support of the North Central Texas Council of Governments’ RTC.

3.2 Conformity Criteria

Specific criteria must be met in order for an MTP, TIP, or regionally significant projects to be found to conform. The criteria, listed in Exhibit 3.2-1, vary based upon the action under review, the pollutant of concern, and the status of the SIP. Further information on each criteria may be found within the text of this document.

Exhibit 3.2-1: North Central Texas Nonattainment Area Applicable Conformity Criteria

All Actions at All Times	40 CFR 93	Chapter
Latest Planning Assumptions	93.110	4/5

PM ₁₀ Control Measures	93.117	Not Applicable

3.3 Checklist

In an effort to improve the efficiency of the conformity determination review process for Texas, a checklist was developed as a guideline for preparing and reviewing Transportation Conformity documents. Exhibit 3.3-1 is the checklist detailing information relevant to this conformity document.

3.4 Emissions Analysis

A regional emissions analysis is the key analytic component of the Transportation Conformity process. It is conducted to demonstrate regional emissions from on-road sources do not exceed the established MVEBs, causing or contributing to violations of EPA NAAQS, and ensures transportation activities are consistent with air quality goals identified in the SIP.

3.4.1 Regional Inventory

This conformity analysis of the NCT nonattainment area accounts for emissions resulting from the nonattainment area’s MTP (Mobility 2045 – 2022 Update), including all regionally significant projects located within the 10-county NCT nonattainment area, and the effects of emission control programs adopted by an enforcing jurisdiction; for example, an Inspection and Maintenance Program.

3.4.2 Emissions Tests

Conformity determinations must demonstrate consistency between expected emissions from implementing the MTP and TIP with the MVEBs in the applicable implementation plan. To meet this requirement, conformity determinations in nonattainment areas with adequate MVEBs from an applicable SIP must perform an MVEB test. For the MVEB test, the emissions analysis must demonstrate the estimated emissions are less than the MVEBs in the applicable implementation plan. Applicable MVEBs¹⁷ for the NCT 10-county nonattainment area are shown in Exhibit 3.4.2-1. A copy of the EPA’s *Federal Register* notice on the anticipated MVEB adequacy can be found in Appendix 12.3.

¹⁷ [85 FR 64084](#)

Exhibit 3.4.2-1: Motor Vehicle Emissions Budgets for the North Central Texas Nonattainment Area

DFW 10-County Nonattainment Area	NO _x (tons/day)	VOC (tons/day)
2020 Motor Vehicle Emission Budgets	107.25	62.41

3.4.3 Analysis Years

The regional emission analysis must be performed for the years for which MVEBs are established, the area's attainment year, if within the timeframe of the plan/conformity, the MTP horizon year, and interim years so that no interval is greater than 10 years. To meet this requirement, the selected analysis years for this conformity determination are 2023 (attainment year for the 2015 ozone NAAQS), 2026, 2036, and 2045 (the MTP horizon year).

The Dallas-Fort Worth Travel Model for the Expanded Area (TAFT) and the EPA's MOVES emissions models were used for this conformity analysis. The EPA's MOVES model produces emission factors for mobile sources. TAFT predicts regional vehicle activity due to human behavior and the EPA's emission model estimates vehicle emission rates. TAFT estimates vehicle activity in three time periods: AM Peak (6:30 AM to 8:59 AM), PM Peak (3:00 PM to 6:29 PM), and Off-Peak (9:00 AM to 2:59 PM and 6:30 PM to 6:29 AM) to better account for human driving behavior as a result of capacity availability fluctuations throughout a day.

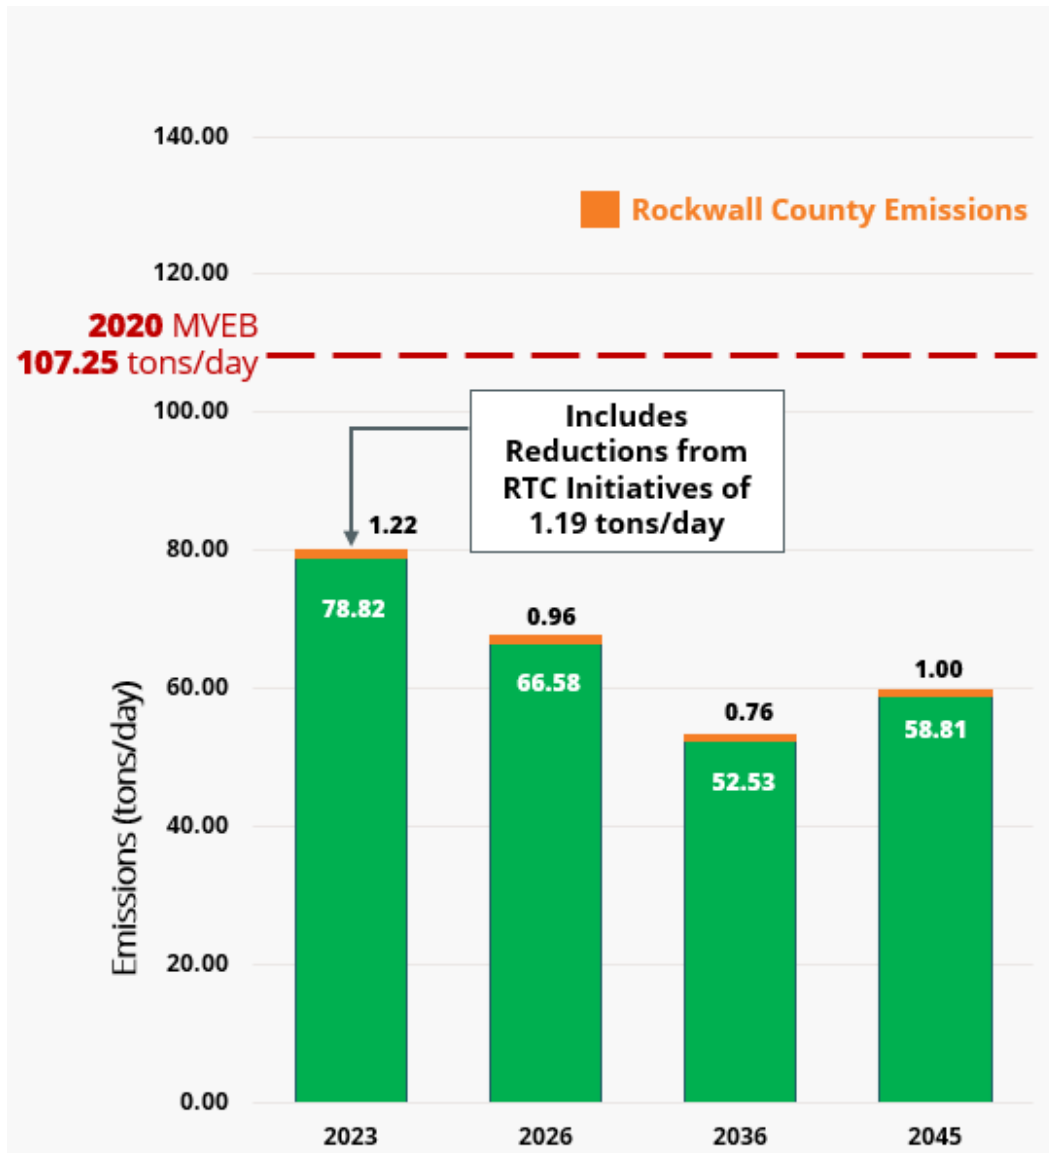

$$\text{Vehicle Emissions} = \text{Vehicle Activity} \times \text{Emission Rates}$$

3.4.4 Analysis Results

This emissions analysis for determining conformity was performed under the Code of Federal Regulations Title 40, Part §93.109(c)(2)(ii)(B). Since the 2015 8-hour ozone nonattainment area covers a smaller geographic area within the 2008 8-hour ozone nonattainment area, the approved 2017 AD SIP MVEBs, shown in Exhibit 3.4.2-1, may be used to determine conformity for the 2015 8-Hour Ozone NAAQS.

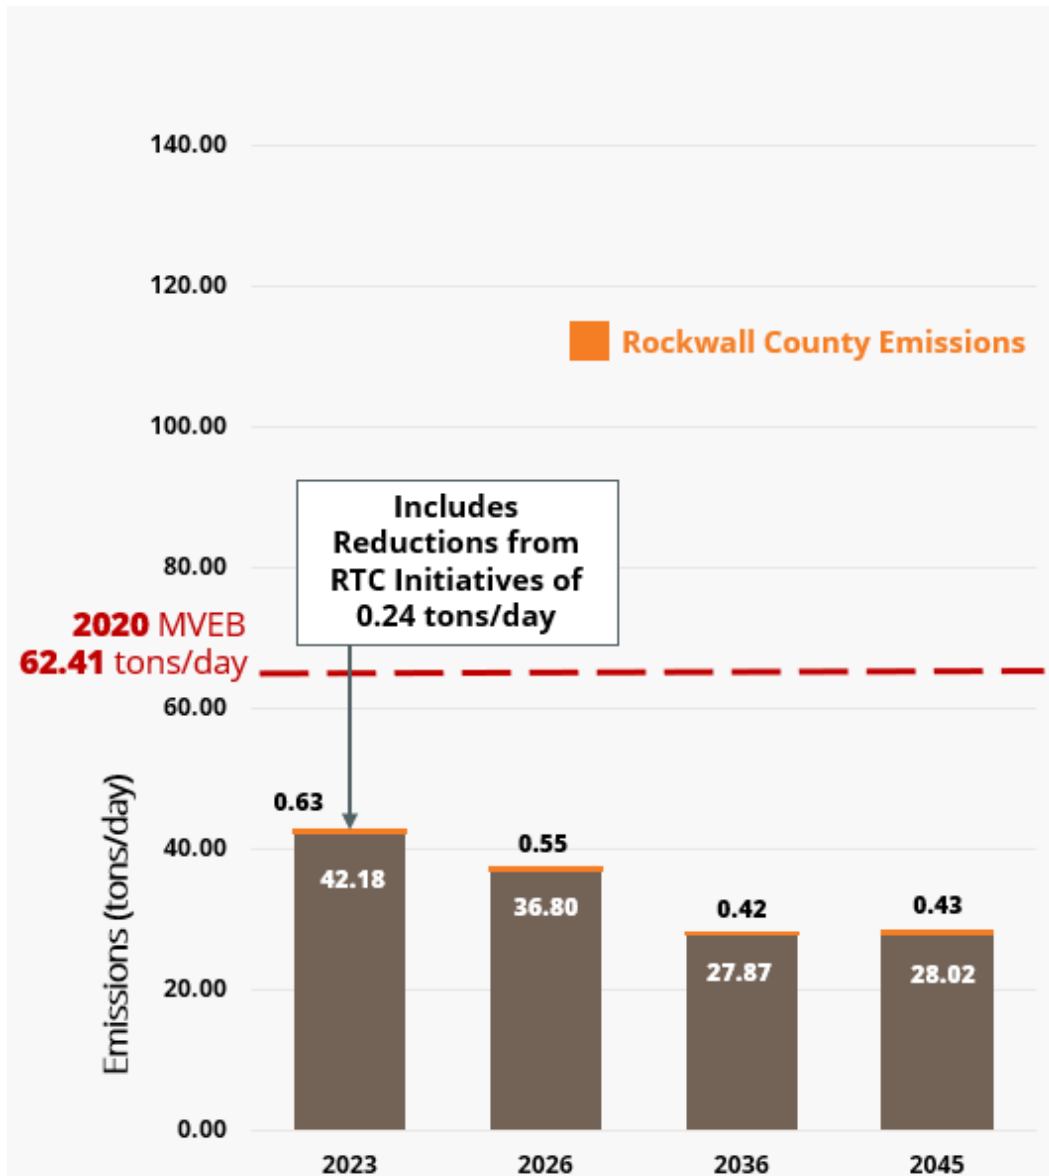

The vehicle emission results shown in Exhibits 3.4.4-1 and 3.4.4-2 demonstrate the NCT nonattainment area meets the regional air quality conformity requirements of the 2020 MVEBs test established for the 10-county nonattainment region. The Exhibits also show the emission results for the 2015 ozone nine-county (excluding Rockwall County) nonattainment region meets the conformity requirements for a newly designated nonattainment region. Exhibits 3.4.4-1 and 3.4.4-2 also depict RTC initiatives for NO_x and VOC for the analysis year 2023. These initiatives include projects and programs put in place to improve air quality. The magnitude of RTC initiatives demonstrates the region's commitment to reducing air pollution by minimizing vehicle emissions while improving mobility and the overall quality of life.
