**TIGER Discretionary Grant Application** 

**April 2014** 

North Central Texas Council of Governments

**Transportation Department** 

#### TIGER DISCRETIONARY GRANT PROGRAM Project Application

Name of Project: S. M. Wright Project – Phase II-B

Agency Submitting Project: North Central Texas Council of Governments (MPO)

**Other Project Parties:** Texas Department of Transportation (Implementing Agency)

**Primary Contact:** 

| Name:           | Michael Morris      |
|-----------------|---------------------|
| Phone Number:   | 817-695-9241        |
| Email Address:  | mmorris@nctcog.org  |
| Street Address: | 616 Six Flags Drive |
|                 | Arlington, TX 76005 |

**Type of Project:** Road and Bridge (IH 45 and thoroughfare improvements)

Project Location:

| City:      | Dallas          |  |
|------------|-----------------|--|
| County:    | Dallas Cour     | nty                                      |
| State:     | Texas           |  |
| Congressio | onal Districts: | District 30 (Rep. Eddie Bernice Johnson) |

Type of Jurisdiction: Urban Area

TIGER Funds Requested: \$13,000,000

**Total Project Cost:** \$26,000,000

**DUNS Number:** 10-246-2256

#### **Table of Contents**

### I. Project Description

This S. M. Wright Project is located in the City of Dallas, Dallas County, Texas. As the metropolitan planning organization (MPO) for the Dallas-Fort Worth area, the North Central Texas Council of Governments (NCTCOG) is responsible for planning and coordinating transportation projects in this area. The project is in an urbanized area and is located immediately south of the City of Dallas Central Business District (CBD). Exhibit 1 shows the location of the S. M. Wright Project in relation to Dallas County, NCTCOG, and the State of Texas.

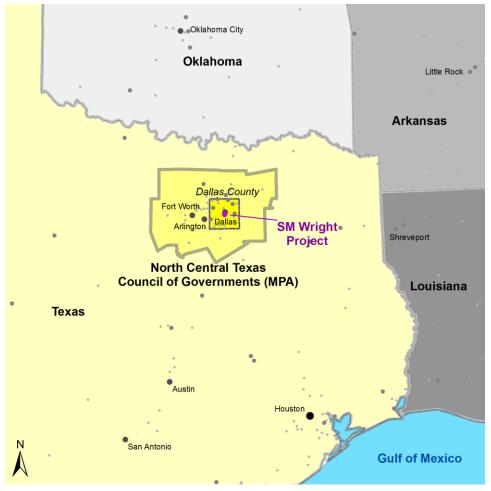

Exhibit 1: S. M. Wright Project Location

In the project area, US 175 has two separate named segments commemorating the lives of local minister and community leader S. M. Wright and Texas Highway Commissioner C. F. Hawn. S. M. Wright Freeway begins south of downtown Dallas at IH 45 and runs in a southeasterly direction intersecting with SH 310.

The S. M. Wright Project has evolved into three distinct phases for environmental clearance and construction. FY 2014 TIGER Discretionary Grant funding is requested only for the S. M. Wright Project – Phase II-B. Exhibit 2 shows the context and phasing of the S. M. Wright Project. A brief overview of the purpose and interrelationship of the

three Phases follows. The purpose of Phase I is to provide a direct connection from existing US 175 and C.F. Hawn Freeway to IH 45. Following the opening of Phase I, Phase II-A will repurpose US 175 from a grade separated six-lane urban freeway to a low speed, six-lane thoroughfare section, providing for landscaping amenities and a trail/bike system. Together, Phase I and II-A will reknit an African American neighborhood that was divided when US 175 was constructed during the 1950s. The Phase I and II-A projects were environmentally cleared together and received a Finding of No Significant Impact in September 2013. Phase 1 construction will begin during the second quarter of 2014; Phase II-A will begin construction in the second quarter of 2017. Phase 1 and II-A represent an investment of \$165 million dollars by the Texas Department of Transportation (TxDOT).

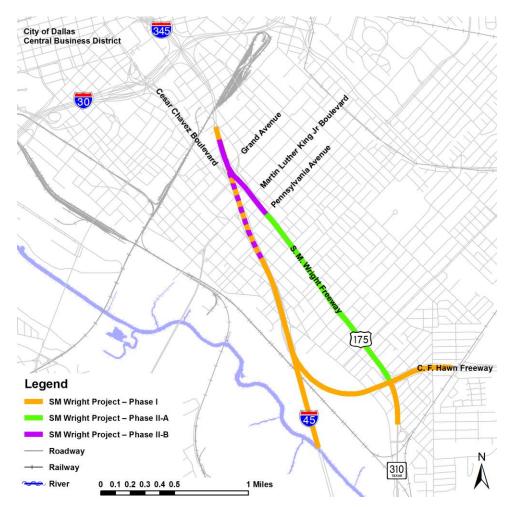

Exhibit 2: S. M. Wright Project Area

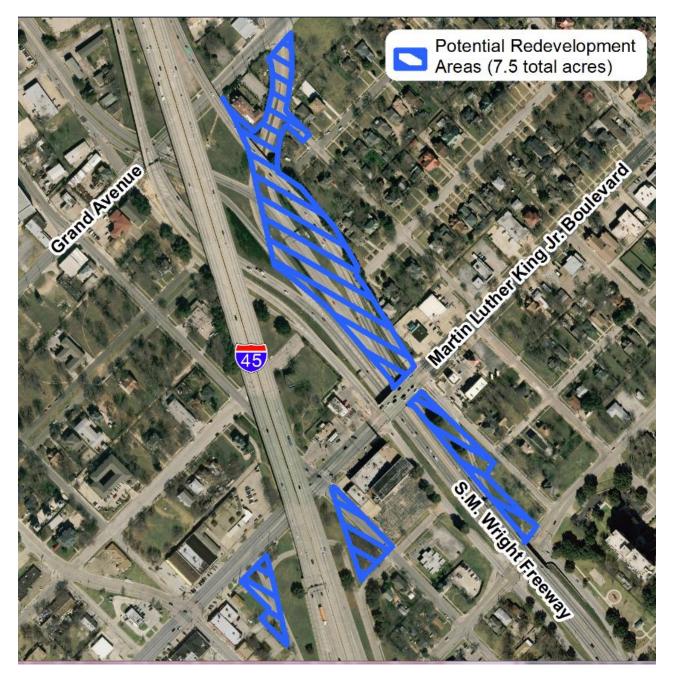

While Phases I and II-A serve to reknit a divided community, the purpose of Phase II-B is to further stimulate and foster economic development in the Fair Park / South Dallas area. Currently, IH 30, an east-west freeway through Dallas, provides the only direct interstate access into this area. Phase II-B would provide direct north south interstate access from IH 45 into the Fair Park/South Dallas area. In addition, Phase II-B proposes to eliminate

Page 2

the weaving ramp system near IH 45, occurring in the area bounded by Grand Ave. and Martin Luther King Jr. (MLK) Blvd. Exhibit 3 is an aerial view of the developable areas which may result with the implementation of Phase II-B. The location and the amount of developable land will be contingent on the Alternative selected. Exhibits 4 and 5 are, respectively, Preliminary Phase II-B, Alternatives A and B.

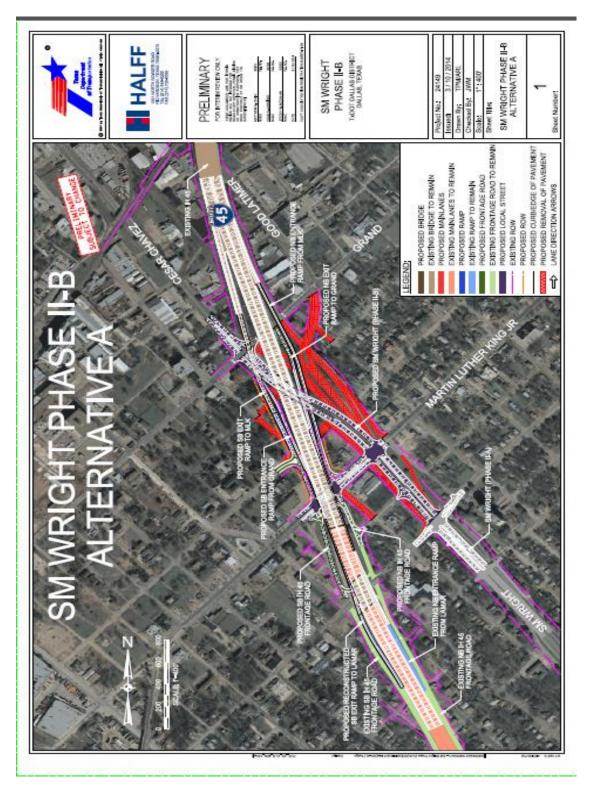

Exhibit 4: S. M. Wright Phase II-B Preliminary Alt A

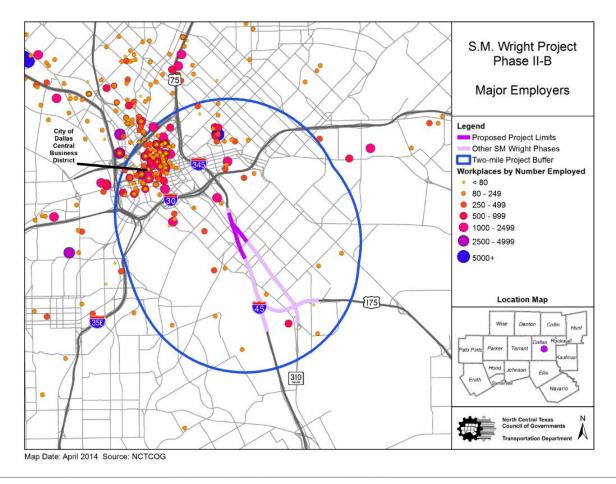

Source: TxDOT – Dallas District and Halff Associates, April 2014

The S. M. Wright Project–Phase II-B would connect the north end of the newly repurposed S. M. Wright Parkway (a six-lane thoroughfare, resulting from Phase II-A) to Cesar Chavez Boulevard, providing a seamless path for residents near S.M. Wright Parkway to the employment centers, Exhibit 6, educational opportunities, and recreational facilities in the City of Dallas Central Business District (CBD). The interweaving access ramps that move freeway traffic between the existing S. M. Wright Freeway and IH 45 would be replaced with a 6-lane local arterial connection. IH 45 access would be transitioned to a split diamond interchange with Grand Avenue for accessing the neighborhoods from the south and with MLK Blvd. for access from the north. The IH 45 frontage roads would be extended north from their current terminus south of MLK Blvd. to simplify travel patterns in the project area.

# Exhibit 6: Major Employers

The Phase II-A freeway-to-parkway conversion will allow for the inclusion of numerous context sensitive design elements such as enhanced pavement to denote neighborhood gateways, landscaping, pedestrian walks and trails, and opportunities for public art. To ensure continuity in appearance between phases, the same aesthetic amenities package will be used in both Phase II-A and Phase II-B.

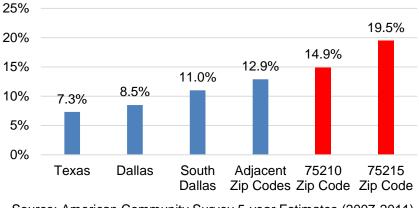

Major transportation infrastructure improvements in South Dallas/Fair Park are not limited exclusively to highways. The opening of Dallas Area Rapid Transit's (DART) Green Line and light rail stations at Fair Park and MLK Blvd. occurred in September 2009. In addition, the area is served by major transit bus routes, along IH 45, US 175, and MLK Blvd. Relative to transportation system management improvements, a large number of signalization projects are proposed in this area, and are listed in the region's approved 2013–2016 Transportation Improvement Program. (TIP)

#### Socio-Economic Context

US 175 serves local, urban, and suburban travelers and is an integral component of the regional transportation network. As stated above, US 175 is also a major bus route for DART. TxDOT ADT volumes for 2010 traffic counts on US 175 (C. F. Hawn Freeway and S. M. Wright Freeway) and IH 45 are approximately 82,000 and 69,000 vehicles per day, respectively. Projected 2035 traffic volumes on the two facilities are expected to increase to 166,000 for US 175 and 160,000 for IH 45. The downsized S. M. Wright Parkway (to be accomplished during Phase II-A) is expected to carry 57,500 vehicles per day in 2035, or about 30 percent less traffic than the S. M. Wright Freeway carries today.

While the project area is predominantly residential in character with commercial/light industrial facilities along Lamar Street, IH 45, and near the US 175/SH 310 interchange, it is zoned for mixed-use development. The neighborhoods within the project area are home to both low-income and minority (environmental justice) populations and the area is economically distressed. Exhibit 7 shows the unemployment rates in the zip codes (75210 and 75215) for the project area compared to other areas in Texas.

# Exhibit 7: Unemployment Rate in the Project Area

Source: American Community Survey 5-year Estimates (2007-2011)

This area's per capita income ranges between \$12,008 and \$16,884; in comparison to the national per capita income of \$27,915 according to the 2007-2011 ACS. Based on the low per-capita income and high unemployment rates, the project area meets the statutory definition of an economically distressed area [42 U.S.C. 3161 § 301(a)]. See Exhibit 8; Median Income Map.

In comparison to resident per capita income above, per capita income of commuter traffic on US 175 was closer to the City of Dallas worker median earnings of \$39,765 for those who drive alone and \$24,973 for carpoolers. The marked disparity in income and unemployment rates is clearly understood by residents of this area, and underscores their drive to bring redevelopment and employment opportunities to their community.

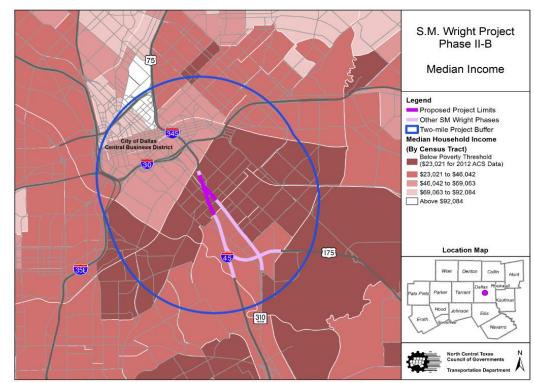

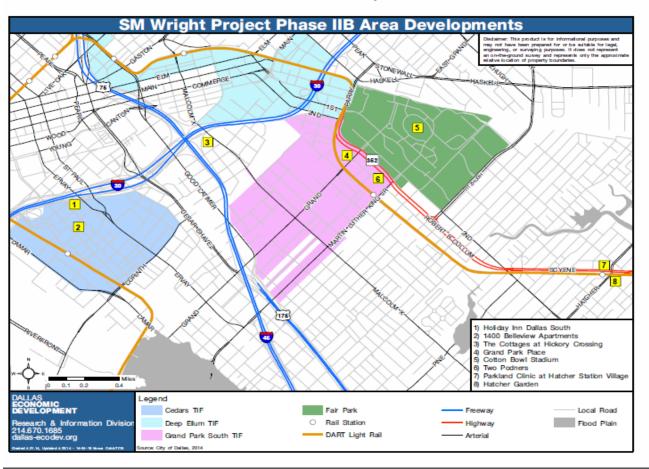

Exhibit 8: Median Income Map

Map Date: April 2014 Source: US Census Bureau (American Community Survey 2008-2012 5-Year Data by Census Tract)

As the concept of the Phase II-B ramps evolved during 2013 community meetings on the Phase I and II Environmental Assessment, it cannot be claimed that it is an integral element of any long standing, coordinated, economic development plan. However, Phase II-B's lack of longevity does not diminish its potential benefits of additional interstate access and acreage for redevelopment. The City of Dallas' Office of Economic Development has, and continues to focus on opportunities in South Dallas/Fair Park. These efforts are anchored by four tax increment finance (TIF) districts in and around the area; Cedars (1992), Grand Park South (2005), Deep Ellum (2005), and the Fair Park Transit Oriented Development (TOD) TIF (2008). The Fair Park TOD will anchor development for the west side of Fair Park, an area which has seen \$111 million in public investment since 2000. Exhibit 9 graphically illustrates the existing TIFs and various City of Dallas developments which may be served through the addition of the proposed IH 45 ramps. Note in particular that the proposed IH 45.

**Exhibit 9: Area Developments** 

S. M. Wright Project – Phase II B

Exhibit 10 is a tabular summary of the area's developments. Dallas' financial commitment to this area can be construed from the funding dedicated in grants [Housing and Urban Development (HUD), Dallas Development Fund, etc.], and total project costs, respectively, \$28,375,000 and \$71,800,000.

#### Targeted Transportation Challenges

South Dallas and Fair Park contain a variety of venues including, but not limited to, Texas Discovery Gardens, African American Museum, Children's Aquarium, the Musical Hall and the Fair Park Band Shell and host a variety of activities during the year, the largest being the Texas State Fair during September and October, and the Texas and OU football game. These venues and activities generate fluctuating demands on the existing transportation system.

In addition to demands resulting from special events or trip purposes (school outings/field trips), the area's transportation system also accommodates daily demands originating from: commuters utilizing US 175, IH 45, and the major thoroughfares to/from and through the Dallas CBD; transportation demands associated with the three area employers with employees numbering between 250 and 499, Cowboy Cab Company, Faubion Associates, Inc., and Renaissance Hospital of Dallas; freight movements whose warehouse destinations are clustered along IH 30 and Lamar Ave; and a number of magnet schools located east of IH 45 and south of IH 30.

During peak periods, the primary users of the IH 45 and US 175 facilities are commuters who live outside the project area and freight vehicles.

Exhibit 11 results from a travel demand model and graphically illustrates the potential utilization of the proposed ramps, relative to regional origins and destinations, during the AM peak period, in 2018.

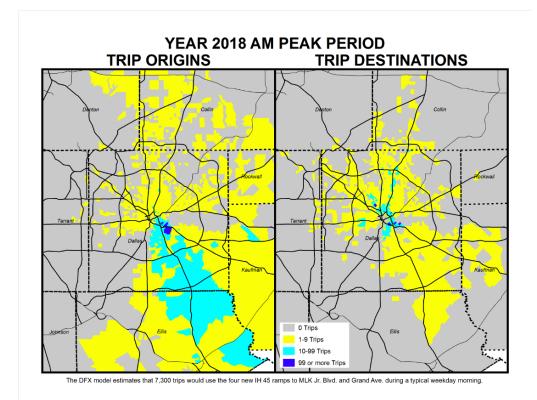

Exhibit 11: 2018 AM Peak Period Origins and Destinations

In the S. M. Wright Project Environmental Assessment, the northern limits of Phase II-A terminated just south of MLK Blvd. This maintained the current 'weaving' access to IH 45, Cesar Chavez Blvd, and Good-Latimer Expressway, which preserves the numerous conflict zones for vehicles and pedestrians, additional obstructions to economic development, and acts as a deterrence to walkable neighborhood

#### Challenges Addressed

Implementation of Phase II-B will eliminate the existing high-speed, high-volume connector ramps from IH 45 to the converted S. M. Wright parkway facility. Instead, new ramps will be built adjacent to the current IH 45 viaduct right-of-way for direct access to/from the north at MLK Blvd., connecting seamlessly to the IH 45 frontage road connections to/from MLK Blvd., built in Phase I. This will permit the full S. M. Wright parkway conversion to extend north to Cesar Chavez Blvd. at its intersection with Grand Avenue. The conversion will include replacing the current S. M. Wright/MLK Blvd. grade separation with a signalized at-grade intersection where local vehicular and pedestrian access to adjacent properties can more effectively occur in all four quadrants. This overall

configuration allows commuter traffic to be rerouted around the urban neighborhoods via IH 45, into areas more appropriate for high traffic volumes and higher speeds, and it enables the anticipated social and environmental benefits of the project to be realized within this environmental justice community.

Additionally, Phase II-B addresses the safety implications and limited parcel accessibility caused by the interweaving access ramps north of MLK Blvd., See Exhibit 3. The ramps are eliminated in favor of the direct arterial connection between the converted S. M. Wright parkway facility and Cesar Chavez Blvd., and access to/from Good-Latimer Expressway is performed via signal-controlled intersections at Grand Avenue. Though not as direct as what the interweaving ramps provide currently, the at-grade connections are more appropriate given the projected lower volumes of the converted parkway facility. In addition, they enable direct local access to/from adjacent land parcels which improve economic development opportunities. Furthermore, the Phase II-B ramp removals provide the opportunity for new ramp connections between Grand Avenue and IH 45 to/from the south. This restores US 175 freeway access that originally occurred via the S. M. Wright corridor, but can now occur directly and more prominently from IH 45 as a result of the previous S. M. Wright Project construction phases. This will open up alternate access to/from major regional events at nearby Fair Park (location of the State Fair of Texas and the Gexa Energy Pavilion) and create more economic redevelopment prospects for surrounding neighborhoods.

### Alternatives Considered

There are currently two proposed alternatives being considered for Phase II-B of the S. M. Wright Project. However, the alternatives differ only in regards to the proposed northbound IH 45 exit ramp to Grand Avenue. Alternative A, Exhibit 4, depicts the ramp intersecting Grand Avenue at a mid-block location adjacent to the IH 45 viaduct crossing between Cesar Chavez Boulevard and Good-Latimer Expressway. Traffic in this alternative would only have the choice to turn east or west on Grand Avenue for access to other roadways in the area. Alternative B, Exhibit 5, shows the ramp connecting to Grand Avenue at its intersection with Good-Latimer Expressway. This alternative allows traffic to proceed directly north on Good-Latimer Expressway in addition to turning east or west on Grand Avenue. While no alternative has been formally selected as of the writing of this TIGER application, and projected cost and/or benefit differences between the two options are minimal, analysis below is based on the development of Alternative B.

#### **II. Project Parties**

#### a. North Central Texas Council of Governments (Submitting Agency)

NCTCOG is a voluntary association of cities, counties, school districts, and special districts established in January 1966 to assist local governments in planning for common needs, cooperating for mutual benefit, and coordinating for sound regional development. NCTCOG serves a 16-county metropolitan region comprised around the two urban centers of Dallas and Fort Worth.

### b. Texas Department of Transportation (Implementing Agency)

The Texas Legislature originally established TxDOT in 1917 as the Texas Highway Department. This project is located in the TxDOT–Dallas District which plans, designs, builds, operates and maintains the state transportation system in the following counties: Collin, Dallas, Denton, Ellis, Kaufman, Navarro, and Rockwall.

#### III. Grant Funds and Sources/Uses of Project Funds

Exhibit 12 details the funding sources of the project. Exhibit 13 details the estimated costs of the project that would be funded through this TIGER Discretionary Grant. All costs are in 2012 dollars. As noted earlier, public input identified deficiencies in the local access provided by the project. The additional ramps along IH 45 and associated intersection improvements are included to provide critical local access to these neighborhoods. The estimated cost of those ramps is \$26 million, the amount of this FY2014 TIGER Discretionary Grant request is \$13 million.

| Right of Way Acquisition | \$0          |                       |                   |
| Utilities                | \$0          |                       |                   |
| Construction Engineering | \$0          |                       |                   |
| Construction             | \$26,000,000 | 20%                   | 80%               |
| TOTAL PROJECT COST       | \$26,000,000 |                       |                   |

#### a. Technical Feasibility

The designs generally adhere to FHWA and TxDOT design standards, though some design exceptions may be requested based on the preliminary design schematics. The designs are technically feasible and the project does not include any unusual design elements. In addition to standard construction techniques, innovative clean construction techniques and green concrete would be used (see Section IV.c – Innovation). The innovative elements would not pose any technical challenges.

#### b. Financial Feasibility

Funds to fully implement the project were identified and approved in April 2014. During the January 2013 Public Hearing for the Phase I and II-A EA, and a final August 2013 Public Hearing, consensus was reached to provide the desired access along IH 45 in the vicinity of Grand Avenue. The estimated cost of these ramps and associated thoroughfare improvements is \$26 million and \$13 million is requested in 2014 TIGER Discretionary Grant funding. The receipt of TIGER funds would allow local elected and transportation officials to complete the necessary improvements which were not identified during the environmental clearance of S. M. Wright Phases I and II-A

NCTCOG currently manages federal as well as state-administered grants that are in various stages of development, implementation, and closeout. In fiscal year 2013, NCTCOG facilitated expenditures of \$24.1 million from various multi-year federal grants including awards from the Department of Energy, Environmental Protection Agency, Federal Transit Administration, Federal Aviation Administration, US Department of Housing and Urban Development, Department of Labor, and the Department of Defense. Also in fiscal year 2013, NCTCOG facilitated expenditures of \$128.2 million from various state-administered grants including awards from the Texas Commission on Environmental Quality, Texas Department of Health, Texas State Energy Conservation Office, and TxDOT. The NCTCOG Transportation Department employs 19 fiscal and grant professionals who provide financial, legal, and compliance support for projects funded from various grants.

No adverse audit findings from standards used by states, local governments, and nonprofit organizations expending federal awards (Circular A-133) have been determined at this time. NCTCOG has not been required to comply with special "high risk" terms and conditions under agency regulations in the implementation of consistency and uniformity in the management of grants and cooperative agreements with state, local, and federally-recognized Indian tribal governments (OMB Circular A-102).

c. Project Schedule

# Exhibit 15: Project Risks and Mitigation Strategies

### e. Performance Monitoring

Based on the primary and secondary criteria presented in this application, Exhibit 16 lists performance measures for evaluating the success of this project.

|                                 | Exhibit 16: Performance Monitoring   |  |  |  |  |  |  |

#### **Exhibit 16: Performance Monitoring**

#### IV. Selection Criteria

The following sections illustrate that the project aligns with each of the primary and secondary selection criteria. All costs and benefits are reported in constant 2012 dollars.

#### a. Primary Selection Criteria

A key component of the project benefit-cost analysis (BCA) was an early identification of a wide range of potential direct and indirect benefits associated with this project, whether those benefits are subjective or objective in their nature. The following table, Exhibit 17, provides a snapshot of these project benefits and how they each relate to the five long-term outcomes as requested by the US Department of Transportation. The primary quantifiable benefits of this project are in the areas of state of good repair, economic competitiveness, and safety.

| Primary<br>Selection<br>Category | Projected Benefit  |  |  |  |
|----------------------------------|--|--|--|--|
| State of                         |  |  |  |  |
| Good Repair                      | Lowers maintenance costs   |  |  |  |
|                                  | Reduces frequency of construction and repair   |  |  |  |
|                                  | Extends pavement life  |  |  |  |
| Economic                         |  |  |  |  |
| Competitiveness                  | Supports Regional Job Opportunity Pilot Program  |  |  |  |
|                                  | Reduces roadway and freight operating costs  |  |  |  |
|                                  | Promotes travel time savings   |  |  |  |
|                                  | Reduces freight shipping costs   |  |  |  |
|                                  | Creates economic development opportunities   |  |  |  |
|                                  | Enhances access to downtown Dallas   |  |  |  |
|                                  | Fuel savings for roadway users, including freight                                      |  |  |  |
|                                  | Creates construction jobs due to project (short term)                                  |  |  |  |
|                                  | Supports long-term job creation  |  |  |  |
| Quality of Life                  | Promotes alternate modes of travel   |  |  |  |
|                                  | Impacts land use changes   |  |  |  |
|                                  | Increases local accessibility and creates alternate routes                             |  |  |  |
|                                  | Reduces congestion on the roadway system   |  |  |  |
| Environmental                    |  |  |  |  |
| Sustainability                   | Shifts air quality and noise impacts to non-residential areas                          |  |  |  |
|                                  | Increases reliability of system  |  |  |  |
|                                  | Reduces both recurring and nonrecurring congestion                                     |  |  |  |
|                                  | Air quality benefits through reduced emissions (NO <sub>X</sub> /VOC/CO <sub>2</sub> ) |  |  |  |
| Safety                           | Reduces costs from crashes, including injuries and fatalities                          |  |  |  |

#### Exhibit 17: Identification of Project Benefits

NOTE: The benefit-cost analysis (BCA) quantifies the benefits from items in **bold**.

#### i. State of Good Repair

This project will increase the state of good repair of the transportation infrastructure of the United States over the medium and long-term by replacing an aging and obsolete access ramp system with a modern urban thoroughfare. The benefits of the project on the state of good repair include reduced overall maintenance costs, reduced frequency of construction and repair, and longer pavement life. There is insufficient data to calculate the benefits from reduced construction/repair frequency and longer pavement life, so the only benefit quantified for the BCA is the reduced overall maintenance cost.

The S. M. Wright Freeway was built in the 1950's and the pavement and structures are reaching the end of their design life. Replacing the outdated interchange and updating the facility to meet current design and safety standards will require minimum maintenance expense for decades after the new facility is constructed. The new roadway would be compatible with current maintenance practices, affording safe and efficient maintenance operations as required by law for the use of Federal highway funds, thus reducing life-cycle costs.

The S. M. Wright Phase II-B project implements a road-diet concept that converts a complicated access ramp system into an urban arterial. This will create a more functional and context-sensitive urban thoroughfare network. The project reduces the overall paved footprint of transportation infrastructure in the project area from by approximately two acres. The expected \$13,750 annual maintenance cost savings associated with the smaller footprint and simplified roadway geometry reduces the life-cycle cost of transportation infrastructure within the project area. The calculations of the maintenance cost reduction benefit are included in the BCA. The net present value of the maintenance savings to the City of Dallas and TxDOT is \$106 thousand assuming a discount rate of seven percent and \$183 thousand assuming a discount rate of three percent.

#### ii. Economic Competitiveness

This project will increase economic competitiveness of the United States over the medium and long-term by encouraging development, increasing accessibility and creating jobs in an economically distressed area. The direct economic competitiveness benefits come from the smaller right-of-way needed for transportation infrastructure in the project area. The project will link the reconfigured S. M. Wright Parkway to Caesar Chavez Boulevard creating seamless access between the neighborhoods and downtown Dallas. It will also establish direct access to IH 45 from Grand Avenue and MLK Blvd. These improvements yield indirect benefits including reduced freight shipping costs, additional travel time savings, and new economic development opportunities. The Regional Job Opportunity Pilot Program (see Section IV.b.i – Innovation for a full description) is an effort to leverage short-term construction jobs on the project into long-term careers for economically disadvantaged workers in the project area.

Much of the right-of-way currently dedicated to access ramps connecting S. M. Wright Freeway to IH 45 and the local thoroughfare network would be returned to other uses. The City of Dallas and TxDOT currently own this right-of-way. After the S. M. Wright Project – Phase II-B is implemented, the stock of developable land in the project area will be increased by approximately 8 acres. The estimated value of this land, based on the land value of commercial and industrial parcels in the area, is \$1.0 million. The calculations of the value of the developable land are included in the BCA. The net present value of the land is \$740 thousand assuming a discount rate of seven percent and \$900 thousand assuming a discount rate of three percent.

Economic development benefits from the project also stem from increased access to jobs and customers for the residents and businesses in the project area. Travel model forecasts show that approximately 3.5 percent more jobs are within a 15-minute drive of the intersection of S. M. Wright Parkway and MLK Blvd. after the project is implemented. This effect was present in both the 2018 and 2035 travel demand forecasts. The increased access is expected to increase the value of the residential and commercial land in the project area by a similar percentage. The estimated value productivity increase is \$1.6 million. The calculations of the increased value land in the project area are included in the BCA. The net present value of the land productivity increase is \$1.1 million assuming a discount rate of seven percent and \$1.4 million assuming a discount rate of three percent.

This project would lead to travel time savings by replacing a complicated access ramp system with a simplified thoroughfare network. Travel model results indicate that the project provides very minor benefits to region-wide roadway and freight operating costs, travel times, freight shipping costs reductions, and fuel savings. These benefits were not quantified to ensure a conservative estimate of the benefits from the project.

As with all infrastructure improvements, this project would create construction jobs in the short-term. Based on the Council of Economic Advisers' (CEA), September 2011 determination that a job-year is created by every \$76,900 in transportation infrastructure spending, this \$26 million dollar project (including the requested \$13 million TIGER Grant funds) would generate approximately 338 job-years. This number is inclusive of onsite jobs and additional employment in other industries due to the multiplier effect. Benefits from short-term job creation were not included in the BCA, because some or all of these benefits would have to be considered transfer benefits.

The project will provide residents the opportunity to acquire highway construction skill-sets and ultimately living-wage jobs. As previously stated, the current classification of S. M. Wright as an urban freeway is not conducive to economic growth or revitalization. This project, in conjunction with other projects proposed by the City of Dallas and the community such as land use planning and flood control improvements, is intended to spur economic development in the project

area. In addition, the Regional Job Opportunity Pilot Program (see Section IV.b.i – Innovation) is an effort to leverage short-term construction jobs on the project into long-term careers for economically disadvantaged workers in the project area.

#### iii. Quality of Life

This project promotes the livability of adjacent neighborhoods by placing priority on enhancing community character, cohesion, social interaction, safety, economic prosperity, and general quality of life. Among the ways this project impacts community quality of life are promoting alternate modes of travel, impacting land use changes, increasing local accessibility, creating alternate routes, and reducing congestion on the roadway system. Many of these benefits are qualitative, so they are not included in the overall calculation of benefits from the project.

As described earlier, the S. M. Wright Project – Phase II-B creates more efficient paths for motorists traveling to and from communities in South Dallas, southern Dallas County, and better access to major employment centers such as the Dallas CBD and the Medical/Market Center. The project also concentrates traffic onto IH 45, improving the air quality and reducing noise impacts of regional traffic on the local neighborhood. The project will complete the aesthetic redesign on the S. M. Wright Parkway begun with Phases I and II-A.

The new design will also provide safer, more reliable routes for DART buses. The community immediately surrounding the project is one of the most transit dependent areas of Dallas. According to 2010 Census data, over 15 percent of the population is over 64, nearly 60 percent are disabled, and almost 37 percent of the households have no vehicles. The use of public transit is 360 percent more than that of the City of Dallas as a whole.

The current designs of the access ramps and frontage roads connecting S. M. Wright Freeway to IH 45 are outdated and do not comply with the Americans with Disabilities Act requirements or complete streets guidelines. The redesigned transportation infrastructure will increase bicycle/pedestrian safety at the intersections of S. M. Wright Parkway with Grand Avenue and MLK Blvd. Both of these intersecting streets are being redesigned based on complete street concepts and implementing S. M. Wright Project – Phase II-B will complement these efforts to improve the quality of life for area residents.

#### iv. Environmental Sustainability

The environmental sustainability benefits include increasing reliability and efficiency of the transportation system, reducing both recurring and nonrecurring congestion. The project is likely to improve energy efficiency, lessen dependence on oil, and reduce greenhouse gas emissions. The air quality benefits from reduced congestion were not quantified to ensure a conservative estimate of the benefits from the project. The other environmental sustainability benefits are generally qualitative and could not be included in the calculation of benefits based on the data currently available.

#### v. Safety

Safety is a primary concern in replacing the access ramp system with an urban thoroughfare. The speed on the S. M. Wright Parkway would be substantially reduced compared to the existing conditions. The local street network will be simplified by brining S. M. Wright Parkway up to match the surrounding neighborhood, with the addition of continuous IH 45 frontage roads across MLK Blvd. In addition, traffic safety on the IH 45 main lanes will be improved as auxiliary lanes are added to this stretch of highway. Removing the obsolete access ramps will discourage IH 45 traffic from continuing to use S. M. Wright Parkway as a regional thoroughfare. By encouraging more traffic to stay on IH 45, the overall regional transportation safety is improved because limited access facilities are relatively safer than local thoroughfares.

The annualized direct safety benefit to vehicles traveling through the project area ranges from \$3.6 million to \$3.7 million. This improved safety comes from several sources: reducing speeds and traffic levels on S. M. Wright Parkway, calming traffic on local roads by simplifying access and reducing the speed on the major thoroughfare; and adding auxiliary lanes and shifting traffic to IH 45. The calculations of the direct safety benefits associated with these improvements are included in the BCA. The net present value of the improved safety within the project area due to design improvements in the project area is \$28.9 million assuming a discount rate of seven percent and \$46.5 million assuming a discount rate of three percent.

The additional regional safety benefit from transitioning users from lower functional classification roadways to higher functional classification roadways is about \$460,000 when the project opens, increasing to \$1.7 million by the end of the 20year project life. The calculations of the regional safety benefits associated with the new access ramp are included in the BCA. The net present value of the regional safety benefits of shifting traffic to higher functional class facilities is \$6.2 million assuming a discount rate of seven percent and \$10.9 million assuming a discount rate of three percent.

#### b. Secondary Selection Criteria

#### i. Innovation

The proposed project would include three innovative elements to pursue the longterm outcomes outlined in the selection criteria. The City of Dallas and NCTCOG plan to use the S. M. Wright Project, including Phase II-B as a pilot project for a jobs training program to help disadvantaged workers in the project area learn skills and find work in the construction industry. Also, the project would be implemented using clean construction techniques and utilize green concrete to increase environmental sustainability.

#### Regional Jobs Opportunity Pilot Program

The project's location is distinctive in that it is in an economically distressed area, as well as within a predominantly African-American community and the Colonial Hill Historic District. In an effort to specifically target job creation in disadvantaged neighborhoods, the Regional Transportation Council (RTC), the policy board of the MPO, allocated funding in January 2013 to support a Regional Jobs Opportunity Pilot Program (RJOPP). As provided for in the RTC's action, the S. M. Wright – Phase I project would launch the RJOPP. The program's goal is twofold:

- i) to increase minority contractors' competitive effectiveness for highway construction jobs through more effective mentoring/training; and
- ii) to address the issue of unemployment and under-employment by recruiting area residents in various highway construction job categories to be employable on transportation construction jobs.

Given the project's unique location, the project area has been the subject of both regional and local planning studies by diverse interest groups concerned with landuse planning and economic development. At the regional level, the *Balanced Vision Plan for the Trinity Corridor* is a conceptual master plan developed by the City of Dallas in 2003 for extensive development of recreational facilities and flood control. The *South Dallas/Fair Park Economic Development Corridor Plan* identified eleven "project opportunity areas" that would help spur local revitalization efforts; four of these commercial nodes for redevelopment are within the project corridor. The S. M. Wright Project – Phase II-B and the RJOPP are both consistent with the City of Dallas' Growth South initiative and work toward the redevelopment of South Dallas. The projects encourage the creation of public-private partnerships that generate and sustain jobs.

A successful jobs program at the regional level requires the integration of a broad spectrum of expertise from governmental and non-governmental entities. The FHWA and TxDOT Offices of Civil Rights are being consulted as the final structure of the program is finalized. Currently, the participating governmental agencies include: the City of Dallas, TxDOT - Dallas District, Workforce Solutions Dallas, and the North Central Texas Council of Governments. Private entities include: Association of General Contractors Texas, Literacy Instruction for Texas (LIFT), CitySquare (a community based organization), and Cornerstone Baptist Church.

For the job categories identified below, a jobs program leading to certification was jointly developed by the Associated General Contractors of Texas and TxDOT; successful program participants will complete the program with a Journeyman skill-set recognized by highway contractors throughout the state. Job placement will be focused on those job categories which will be utilized for the majority of a project's life, and will exclude seasonal or phase-dependent jobs. These jobs include, but are not limited to, concrete finishers, form setters, reinforcing steel workers, and pipe layers. Placing area residents in these jobs is expected to stimulate economic activity in South Dallas. Based upon Texas Counties wage rate zones, as well as wage rates for Dallas County (as of January 6, 2012), wages for program participants would range between approximately \$11.01/hour and \$17.68/hour.

Enhanced mentoring and training opportunities for MWSBE contractors will be coordinated with TxDOT and the NTTA Cooperative Inclusion Plan (see <u>www.ntta.org/procurement/busdiv/programs/Pages/Cooperative-Inclusion-plan.aspx</u>). Through focused mentoring efforts for MWSBE contractors, based upon Business Action Plans developed for each contractor, success rates at winning TxDOT highway construction contracts are anticipated to improve.

During the next three years, the total amount of construction for other TxDOT projects in close proximity to South Dallas amount to \$1.7 billion. Approximately \$8.3 billion dollars are projected to go to construction within the TxDOT–Dallas District during the same timeframe. This will provide ample opportunity for RJOPP trainees to secure a living-wage. The multi-billion dollar investment in highway construction projects, with construction taking three to five years or more, will allow program participants to create a track-record of success. In addition, RJOPP participants will be in a position to take over for the approximately 30 percent of the current workforce of skilled highway construction workers who (according to BLS estimates) will be eligible for retirement in the next 5 to 10 years.

In conclusion, the award of a \$26 million 2014 TIGER grant will complement ongoing regional efforts to provide the unemployed and under-employed disadvantaged residents with marketable job skills to earn a living wage.

#### Clean Construction Techniques

As the MPO of an ozone nonattainment area, the NCTCOG Transportation Department works to develop air quality control strategies that reduce emissions of criteria pollutants associated with ozone formation, specifically NO<sub>x</sub>. In recent years, NCTCOG staff has been investigating potential strategies to address emissions from construction equipment, which contributes approximately eight percent of ozone-forming NO<sub>x</sub> emissions in North Central Texas, according to preliminary modeling conducted by TCEQ. Staff has determined that contract specifications which include emissions-related requirements on public works or other construction projects may be one of the more promising strategies to reduce emissions.

The negative impacts associated with diesel pollution from construction equipment utilized in roadway projects have been recognized at the federal level. Though it was not passed, the Clean Construction Act of 2011 focused on reducing particulate matter (PM) emissions from construction equipment. The NCTCOG Clean Construction Specification is similar in nature to this legislation. However, rather than PM, the local requirements target reductions in NOx, which is the primary determinant of ozone formation in the Dallas-Fort Worth ozone nonattainment area. To set a regional example, take a leadership role, and increase sustainability benefits of this project, NCTCOG will incorporate a Clean Construction Specification on this project. The Clean Construction Specification will help mitigate emissions associated with construction equipment utilized during the construction phase of this project. The specification will require use of construction equipment which meets Tier 2 or better emissions standards, with certain exemptions for situations where such equipment is not practicable (e.g. equipment which is seldom used, equipment brought on-site in an emergency situation). Operational requirements, such as idling limitations, will also be in place. Up to one percent of the total project cost may be utilized to help offset additional project expenses associated with contractors' compliance with this requirement.

#### Green Concrete

In October 2006, The North Texas Clean Air Steering Committee (NTCASC), a committee of the NCTCOG Executive Board, passed a resolution requesting that local governments in the nonattainment area give special consideration to purchasing cement sourced from cement kilns which meet lowest emissions levels. This measure was passed as another strategy to work toward reducing ozone-forming emissions, specifically NO<sub>x</sub>. During construction of this project, NCTCOG will also include a requirement that all cement used in the project be sourced from a kiln which meets an emission rate of 1.7 pounds of NO<sub>x</sub> per ton of clinker or less. This requirement will ensure that cement is sourced from a kiln which is using a lower-emitting production process compared to industry counterparts.

# ii. Partnership

The S. M. Wright Project – Phase II-B project demonstrates a strong commitment to collaboration with a broad range of participants, including integration between transportation planning, implementation, and other public service efforts.

#### a) Jurisdictional and Stakeholder Collaboration

The public consensus to extend C. F. Hawn Freeway to IH 45 and downsize S. M. Wright Freeway was achieved through a five-year joint study by the City of Dallas, community stakeholders, and TxDOT. The residents and neighborhood leaders in this area have been very active in community development and revitalization. The master plan for S. M. Wright Freeway produced for the City of Dallas study is available at <u>www.nctcog.org/trans/tip/private/</u>175concept.pdf. This master plan outlines how the conversion of S. M. Wright

to an arterial and subsequent surplus right-of-way can provide community benefits by:

- Eliminating the segregating roadway and overhead bridges
- Buffering the road from adjacent neighborhoods through landscaping
- Installing a pedestrian/bike trail
- Doubling the size of an adjacent city park (Kimble Park)
- Expanding parking at an adjacent retirement home

This project has and will continue to have strong support from elected officials, the City of Dallas, and the community. The connection of US 175 to IH 45 and the reconstruction of S. M. Wright Freeway as an arterial are supported by the City of Dallas *Trinity River Corridor Comprehensive Land Use Plan*, March 2005. The S. M. Wright Project will help the city and community redevelopment goals to revitalize this area by opening up areas (such as the South Lamar Industrial District) to a new generation of development opportunities. The transportation elements included in the S. M. Wright Project – Phase II-B were developed in response to public comments received during environmental clearance of Phases I and II-A.

# b) Disciplinary Integration

The city and community are looking forward to the neighborhood rejuvenation, improved quality of life, and safety-related opportunities provided by both the proposed S. M. Wright Project – Phase I and the freeway-to-parkway conversion that will start with S. M. Wright Project – Phase II-A and can be completed with S. M. Wright Project – Phase II-B. They feel this new, highly anticipated project will benefit existing and future residents, in the form of job creation, business opportunities, retail availability, and enhanced neighborhood character.

The Regional Jobs Opportunity Pilot Program (RJOPP) (see Section IV.b.(i) – Innovation) represents an integrated effort between multiple disciplines. Public sector participants include: the City of Dallas, TxDOT - Dallas District, Workforce Solutions Dallas, and the North Central Texas Council of Governments. The participating private entities include: Association of General Contractors Texas, Literacy Instruction for Texas (LIFT), CitySquare (a community based organization), and Cornerstone Baptist Church.

#### c. Results of Benefit-Cost Analysis

The benefits described in previous sections were monetized in the BCA Appendix. The benefits of the project documented in the BCA are shown in Exhibit 18. The net present value of the S. M. Wright Project – Phase II-B is shown in Exhibit 19. Applied to a total project cost of \$26 million, a substantial net benefit is achieved for both discounting scenarios. Based on a project life of 20 years, the overall effect of this transportation investment will result in a positive **lifetime net benefit** of **\$39.6 million** 

at three percent and **\$17.2 million** at seven percent, after netting out the cost of the project. The calculations used to determine these totals are discussed in more detail in the BCA.

| Banofit Cotogony          | Benefits         | Benefits        |  |  |  |  |
|---------------------------|------------------|-----------------|--|--|--|--|
| Benefit Category          | 7% Discount Rate | 3%Discount Rate |  |  |  |  |
| Maintenance Savings       | \$106,227        | \$182,836       |  |  |  |  |
| Economic Competitiveness  | \$1,887,880      | \$2,284,058     |  |  |  |  |
| Geometric Crash Reduction | \$28,856,733     | \$46,491,652    |  |  |  |  |
| Crash Reduction           | \$6,190,340      | \$10,936,312    |  |  |  |  |

#### Exhibit 18: Total Project Benefits

# Exhibit 19: Net Project Benefits

| Discount<br>Rate | Net Present<br>Value of<br>Total<br>Benefits | Rounded<br>Net Present<br>Value of<br>Total<br>Benefits | Return on<br>Investment |
|------------------|--|---|-------------------------|
| 7 Percent        | \$17,249,828                                 | \$17.2 million  | 66 percent              |
| 3 Percent        | \$39,615,396                                 | \$39.6 million  | 152 percent             |

The overall net effect of this transportation investment will result in a positive lifetime **return on investment** of **152 percent** (\$39.6 million/\$26 million) and **66 percent** (\$17.2 million/\$26 million), after discounting at three percent and seven percent, respectively. The results of this BCA clearly indicate that this project will provide a lifetime of benefits to the region and will substantially improve the quality of life for its residents.

The BCA used conservative estimates of the benefits of the project to avoid doublecounting. The documented benefits do not include many benefits to the community and to the nation stemming from the project due to the difficulty of developing specific quantitative methods to estimate them. In addition to the benefits documented in the BCA, the project would provide benefits that can only be estimated qualitatively. Those benefits include reduced traffic noise and emissions in the neighborhoods along S. M. Wright Freeway as some commuter traffic is routed directly to IH 45.

#### V. Planning Approvals, NEPA, and other Environmental Reviews/Approvals

#### a. NEPA Status

The environmental clearance for S. M. Wright Phase II-B will begin during the second quarter of 2014. As the level of impacts and potential controversy is anticipated to be small, it is assumed that the project will require an environmental assessment.

Status of NEPA Process: Briefings to various state and local officials continue, prior to initiating public outreach. The Public Hearing for the environmental assessment is anticipated to occur during the third quarter of 2015.

Anticipated Environmental Clearance: A Finding of No Significant Impact (FONSI) is anticipated to be issued by TxDOT during the fourth quarter of calendar year 2015.

The Texas Department of Transportation has assumed FHWA's NEPA responsibilities and will have oversight authority on the project.

#### **Description of Needed Federal Actions**

The project requires design approval from the FHWA, including completion of an Interstate Access Justification (IAJ) Report. A Section 4(f) permit may also be needed for the project. As these permits and certifications are typically required for many highway projects, and as TxDOT is well-experienced in securing them, no difficulties are foreseen in obtaining them.

#### b. Legislative Approvals

Legislative approvals are not required for this project.

#### c. State and Local Planning

#### Local Planning

This project is the result of a collaborative planning effort of the City of Dallas, TxDOT, and NCTCOG. The connection of US 175 to IH 45 and the reconstruction of S. M. Wright Freeway as an arterial are included in the City of Dallas *Trinity River Corridor Comprehensive Land Use Plan*, March 2005.

#### TIP/STIP Status

S. M. Wright Phase II-B will be included in the August 2014 TIP modification cycle. A project construction cost of \$26,000,000 will be shown. Should the project receive TIGER Grant funds, the project entry will be updated.

#### Metropolitan Transportation Plan

The project will be added to the region's *The Metropolitan Transportation Plan for North Central Texas.* Because Dallas County is classified as nonattainment of ozone,

transportation conformity applies. The project will be included in a conforming MTP and the STIP.

#### Statewide Transportation Plan

This project will be included in the *Unified Transportation Plan* and the *Statewide Long-Range Transportation Plan* based on the project's inclusion in the TIP and MTP. This project supports the major goals of both statewide planning documents, including congestion relief, improved safety, air quality, and quality of life, enhanced economic opportunities, and streamlined project delivery.

#### VI. Federal Wage Rate Certification

NCTCOG supports entities that comply with federal labor laws. Any procurement activities sponsored by these entities require compliance with all federal, state, and local laws. In addition, in order to qualify for incentives, businesses must abide by all federal, state, and local laws.

As indicated above, NCTCOG complies with Title VII of the Civil Rights Act of 1964 and the Americans with Disabilities Act (ADA). Both of these laws require all private employers, state and local governments, and education institutions that employ 15 or more individuals, private and public employment agencies, labor organizations, and joint labor management committees controlling apprenticeship and training to comply. As a matter of policy and law, these agencies will follow these laws and principles for this (and all) projects.

As the submitting agency, NCTCOG certifies compliance with federal wage rate requirements as indicated on the next page.

#### Federal Wage Rate Requirement

The North Central Texas Council of Governments (NCTCOG), as an applicant for Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grant funds, certifies that for TIGER funds awarded to NCTCOG it will comply with the requirements of Subchapter IV of Chapter 31 of Title 40 (40 U.S.C. 3141, *et. seq.*) (federal wage rate requirements) as required by the Fiscal Year 2014 Continuing Appropriations Act.

Furthermore, NCTCOG annually certifies compliance with the Davis-Bacon Act as amended, 40 U.S.C. 3141 *et. seq.*, the Copeland "Anti-Kickback" Act, as amended, 18 U.S.C. 874, and the Contract Work Hours and Safety Standards Act, as amended, 40 U.S.C. 3701 *et seq.*, regarding labor standards for federally assisted projects. NCTCOG certifies to this provision within its annual Certifications and Assurances to the Federal Transit Administration.

#### I. Methodology

The following description provides the methodology for various sections within the Benefit Cost Analysis (BCA), including detailed calculations of benefits and costs of the S.M. Wright Phase II-B project for the years between 2014 and 2039, for each cost and benefit factor. Benefits are assumed to incur after project completion in 2018 for a 20-year life span of the projects to 2039.

Traffic forecasts were conducted for current conditions (2013) and for build and nobuild conditions in 2019 and 2035 using the NCTCOG DFX Regional Travel Demand Model. This version of the travel demand model and the no-build transportation networks were used for *Mobility* 2035 – 2013 Update: The Metropolitan Transportation Plan for North Central Texas. The only modification made in running the two build alternatives was the addition of the S.M. Wright Phase II-B project to the transportation network.

#### a. Project Cost

Proposed construction costs were obtained from the Texas Department of Transportation. Annual construction costs were estimated based on the proposed construction schedule for S.M. Wright Phase II-B. The project schedule is shown in section III.c of the S.M. Wright Phase II-B FY2014 TIGER Discretionary Grant Application.

#### b. Short Term Jobs

Per BCA Guidance, the proposed transportation investment per quarter was divided by \$76,900 to calculate the short-term job-years and short-term jobs generated by quarter. These results were used to calculate the number of direct construction jobs created by funding the S.M. Wright Phase II-B project. No job creation benefit was included in the overall benefits of the project.

#### c. Maintenance Savings (State of Good Repair)

Reduced annual maintenance costs are a direct benefit of the S.M. Wright Phase II-B project. The overall paved footprint of transportation infrastructure in the project area would be reduced. The reduction in total paved area will reduce the annual cost of maintaining the transportation infrastructure. The total paved area under the no build condition was calculated based on aerial orthophotography from 2013. The paved area in the build condition was calculated from the preliminary schematic for Alternative A.

It was assumed that the annual maintenance cost for areas paved in concrete is \$10,000 per lane-mile. This figure was converted into an annual cost of \$6,875 per acre by assuming 12 foot lanes. The difference in the paved area was then multiplied by the annual cost to calculate the benefit from reduced maintenance costs.

#### **Equation for Annual Maintenance Benefit:**

Annual Maintenance Benefit

= (Paved Footprint<sub>No Build</sub> – Paved Footprint<sub>Build</sub>)  $\times \frac{$6,875}{acre}$ 

#### d. Developable Land (Economic Competitiveness)

Much of the right-of-way currently dedicated to access ramps connecting S.M. Wright Freeway to IH 45 and the local thoroughfare network would be returned to other uses. The City of Dallas and TxDOT currently own this right-of-way. After the S.M. Wright Project – Phase II-B is implemented, the stock of developable land in the project area will be increased by approximately 7.5 acres. To quantify this benefit the land value for the newly developable area was assumed to be similar to the land value of existing commercial/industrial parcels near the project. Based on current 2014 parcel data from the Dallas County Appraisal District (<u>http://www.dallascad.org/</u>), there were 242 commercial and/or industrial properties within the project study area. The total area of these parcels was 168.768 acres. The assessed land value (which excludes the value of buildings and other improvements) was \$23,487,090. Therefore, the average value of this type of developable land in the project area is \$139,167.68/acre. This dollar amount was multiplied by 7.5 acres to calculate the one-time benefit of the increase in developable land.

#### Equation for Developable Land Benefit:

 $Developable Land Benefit (One Time) = Area of Newly Developable Land \times \frac{\$139,167.68}{acre}$ 

#### e. Improved Access (Economic Competitiveness)

Economic development benefits from the project also stem from increased access to jobs and customers for the residents and businesses in the project area. Travel model forecasts show that approximately 3.5 percent more jobs are within a 15-minute drive of the intersection of S.M. Wright Parkway and MLK Jr. Boulevard after the project is implemented. This effect was present in both the 2019 and 2035 travel demand forecasts. The increased access is expected to increase the value of the residential and commercial land in the project area by a similar percentage. The benefit from improved access was calculated by multiplying \$45,831,190 (the total land value of the 1,787 parcels within the project study area) by 3.5 percent.

#### **Equation for Improved Access Benefit:**

#### *Improved Access Benefit (One Time)*

= Land Value of Parcels within 0.5 mile of the Project Area  $\times$  3.5%

#### f. Geometric Crash Reduction Benefit (Safety)

The construction of the S.M. Wright Project – Phase II-B will reduce crashes in the project area through improvements to the configuration of the transportation system. This improved safety comes from several sources: reducing speeds and traffic levels on S.M. Wright Parkway; calming traffic on local roads by simplifying access and reducing the speed on the major thoroughfare; and adding auxiliary lanes and shifting traffic to IH 45.

Crash data between 2009 and 2013 from the Texas Department of Transportation was used in the analysis. Annual crash frequencies were developed for S.M. Wright Freeway (including the access ramps), IH 45, and for a combination of other local thoroughfares. These crash frequencies and regional travel model current year facility volume estimates were used to develop crash rates for each of the three facilities.

Three crash modification factors (CMF) were applied to the daily travel volumes in the build alternatives. The speed reduction on S.M. Wright Parkway compared to the existing access ramps will be in the 15 to 20 miles per hour range. The Crash Modification Factor Clearinghouse (<u>http://www.cmfclearinghouse.org/</u>) lists CMF ID 1240, "Lower posted speed by 15-20 mph" that was applied to the daily vehicle miles traveled on S.M. Wright Parkway in the project area. The addition of auxiliary lanes between ramps on IH 45 will increase safety for drivers on IH 45. The Crash Modification Factor Clearinghouse lists CMF ID 3898, "Provide an auxiliary lane between an entrance ramp and exit ramp" that was applied to the daily vehicle miles traveled on IH 45 in the project area. The reconfigured interactions between the local streets, IH 45 frontage roads and S.M. Wright Parkway will calm traffic on connecting facilities. The Crash Modification Factor Clearinghouse lists CMF ID 588, "Area-wide or corridor-specific traffic calming" that was applied to the daily vehicle miles traveled on local thoroughfares in the project area.

A composite expected crash rate for the project area was developed for four conditions: 2019 no build, 2019 build, 2035 no build, and 2035 build. The project area crash rate accounted for safety improvements based on shifts in the volumes traveling on each facility and the geometric improvements included in the project. The difference in expected crashes between the build condition and the no build condition is the direct safety benefit of the project. These reductions in crashes were then monetized based on the guidance in the TIGER BCA Resource Guide.

## Equation for Annual Geometric Crash Reduction Benefit:

Annual Geometric Crash Reduction Benefit

=  $(Expected Crash Rate_{Build} - Expected Crash Rate_{No Build})_{KABCO Type}$ × KABCO to AIS Conversion × Monetized Value\_{By AIS Type}

#### g. Regional Crash Reduction Benefit (Safety)

The removal of direct access ramps between S.M. Wright Parkway and IH 45 and addition of access ramps and auxiliary lanes to IH 45 will encourage more vehicles to use IH 45. This redistribution of traffic helps to improve regional transportation safety because limited access facilities are relatively safer than local thoroughfares and other secondary streets. This benefit is calculated by comparing the proportion of system-wide VMT on each functional classification of roadway under the build and no build conditions.

The lowa Department of Transportation published crash rates per HMVMT for vehicles traveling on limited access facilities based on data from 2001-2009 (http://www.iowadot.gov/crashanalysis/pdfs/crash\_rate-density\_comparables\_segments\_2001-2009\_20100706\_dividedroadmainline.pdf). A similar publication listed crash rates per HMVMT on secondary roadways based on data from 2002-2011 (http://www.iowadot.gov/crashanalysis/pdfs/crash\_rate-density\_comparables\_segments\_2002-2011\_20130215\_secondary\_functionalclass.pdf). TxDOT and NCTCOG do not have similar data, so the Iowa data was used to calculate the safety benefits to transportation system users in the Dallas-Fort Worth users.

To ensure that this estimate is conservative and freeways, freeway ramps, and managed or HOV lanes were assumed to generate crashes at the same rate as "Urban Expressways" in Iowa. Freeway service (or frontage) roads were assumed to be comparable to principal arterials. Other Dallas-Fort Worth roadways were directly comparable to the Iowa classification system. This methodology is based on the assumption that the differential in crash rates between roads of each functional classifications is similar regardless of the absolute crash rate of a state or region.

## Equation for Annual Regional Crash Reduction Benefit:

Annual Regional Crash Reduction Benefit

- = (Daily VMT<sub>By Roadway Class</sub> (Build Network)
- $Daily VMT_{By Roadway Class}$  (No Build Network)) × 365 days
- $\times$  Iowa Crash Rate<sub>By Roadway Class</sub>  $\times$  KABCO to AIS Conversion
- $\times$  Monetized Value<sub>By AIS Type</sub>

#### NOTE:

A static version of the Microsoft Excel spreadsheets used to calculate the costs and benefits are included below. A copy of the Microsoft Excel file is also included in the S.M. Wright Project – Phase II-B FY2014 Grant Application submittal.

#### Geometric Crash Reduction Data

# Unknown Injury

Crashes

#### Notes for All Crash Data:

This data consist of all locatable crashes that include latitude and longitude information
 This data consist of all crash types that occurred within 100 feet of the area bounded by Ervay Street, Pennsylvania Avenue, Atlanta Street, and Coombs Street. This area is the project area of the S.M. Wright Project – Phase II-B.
 This data is composed of TADOT "Reportable Crashes" only

 A "Reportable Motor Vehicle Traffic Crosh" is defined by TXDOT as: any crash involving motor vehicle in transport that occurs or originates
 on a traffic way, results in injury to or death of any person, or damage to the property of any one person to the apparent extent of \$1,000
 i. A traffic way, results in injury to or death of any person, or damage to the property of any one person to the apparent extent of \$1,000
 i. A traffic way is defined as any land way open to the public as a matter or fright or crustom for moving persons or property from one place to another

Letters of Support

CAROLYN R. DAVIS COUNCILMEMBER DISTRICT 7 Council Committees: Housing - Chair Ad Hoc Legislative Public Safety Quality of Life

Arts, Culture & Libraries

April 24, 2014

The Honorable Anthony Fox Secretary of Transportation United States Department of Transportation 1200 New Jersey Avenue, SE Washington, DC 20590

RE: NCTCOG – 2014 TIGERS Grant Application S.M. Wright Phase IIB Project – Dallas, Texas

Dear Secretary Foxx:

I would like to express my support for the United States Department of Transportation (USDOT) 2014 Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grant application submitted by the North Central Texas Council of Governments (NCTCOG) for the S.M. Wright Phase IIB project in Dallas, Texas.

The S.M. Wright project will provide an economically, distressed area additional Interstate access to/from Interstate Highway 45. This project evolved from community concerns expressed during the 2013 environmental clearance of S.M. Wright Phases I & II. Specifically, it addresses the constrained highway access provided to areas of South Dallas, which are being targeted for economic development. Interstate access to/from IH 45, in the vicinity of Grand Avenue, would catalyze this on-going development and improve the quality of life for South Dallas residents.

Again, I fully support the 2014 TIGER Grant application submitted by NCTCOG for the S.M. Wright Phase IIB project. Thank you for your time and consideration of this project.

Sincerely,

Twen Kellanes

Carolyn R. Davis

The Transportation Policy Body for the North Central Texas Council of Governments (Metropolitan Planning Organization for the Dallas-Fort Worth Region)

April 21, 2014

The Honorable Anthony Foxx Secretary of Transportation United States Department of Transportation 1200 New Jersey Avenue, SE Washington, DC 20590

Dear Secretary Foxx:

On behalf of the Regional Transportation Council (RTC), which serves as the Metropolitan Planning Organization (MPO) for the Dallas-Fort Worth area, I am pleased to support the 2014 Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grant application to the US Department of Transportation from the North Central Texas Council of Governments (NCTCOG) for the S.M. Wright Phase IIB project in Dallas, Texas. A membership roster of the RTC is enclosed.

The S.M. Wright project will provide an economically distressed area with additional Interstate access to/from Interstate Highway (IH) 45. This project evolved from community concerns expressed during the 2013 environmental clearance of S.M. Wright Phases I & II. Specifically, it addresses the constrained highway access provided to areas of South Dallas which are being targeted for economic development. Interstate access to/from IH 45 in the vicinity of Grand Avenue would catalyze this ongoing development and improve the quality of life for South Dallas residents.

The project is included in <u>Mobility 2035: The Metropolitan Transportation Plan for North Central Texas – 2013 Update</u>. All federally funded surface transportation projects must also be included in the Transportation Improvement Program. The project is included in the <u>2013-2016</u> <u>Transportation Improvement Program for North Central Texas</u>.

Again, the RTC supports NCTCOG's 2014 TIGER grant application for the S.M. Wright Phase IIB project. Thank you for your time and consideration. If you have any questions, please contact Michael Morris, P.E., Director of Transportation for NCTCOG, at (817) 695-9241.

Sincerely,

Kathryn Hilemon

Kathryn Wilemon Chair, Regional Transportation Council Mayor Pro Tem, City of Arlington

April 23, 2014

The Honorable Anthony Fox Secretary of Transportation United States Department of Transportation 1200 New Jersey Avenue, SE Washington, DC 20590

Dear Secretary Foxx:

Early in 2013, I received the first of what would be numerous calls to my office from constituents concerned with plans associated with components of the S.M. Wright project. An issue was raised from review of preliminary draft proposals feared to reduce access to and from Interstate Highway 45 (IH45) that passes in part, through my state senatorial district and also through the South Dallas community.

What took place from that point was an exercise in open and responsive government and public participation. Immediately, additional meetings were convened where local Texas Department of Transportation (TxDOT) and regional transportation officials met with community leaders and the public to hear their concerns firsthand. In May 2013, I held a joint Town Hall Meeting along with State Rep. Eric Johnson, TxDOT and City of Dallas officials where the issues with on and off ramps were resolved. But what also emerged from that meeting was the community's request for additional access to IH45. The revised plans were presented to the community at a public hearing held in June 2013. It contained the S.M. Wright IIB proposal that is now before you.

I wholeheartedly lend my support for the United States Department of Transportation (USDOT) 2014 Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grant application submitted by the North Central Texas Council of Governments (NCTCOG) for the S.M. Wright Phase IIB project in Dallas, Texas.

The S.M. Wright project will provide an economically, distressed area additional interstate access to/from Interstate Highway 45. This project evolved from community concerns expressed during the 2013 environmental clearance of S.M. Wright Phases I & II. Specifically, it addresses the constrained highway access provided to areas of South Dallas, which are being targeted for economic development. Interstate access to/from IH 45, in the vicinity of Grand Avenue, would catalyze this on-going development and improve the quality of life for South Dallas residents.

April 23, 2014 S. M. Wright TIGER grant support letter Page 2

Again, I fully support the 2014 TIGER Grant application submitted by NCTCOG for the S.M. Wright Phase IIB project. It is consistent with my September 2009 letter of support submitted to the USDOT for the S.M. Wright Phase II proposal that I have been involved with since the overall plan's inception. Thank you for your time and consideration of this project.

Sincerely,

my WN

Royce West Texas Senate District 23
